

METHOD AND APPARATUS FOR QUANTIFYING A RAPID IMMUNOCHROMATOGRAPHIC TEST

ABSTRACT

5

A method for quantifying a rapid immunochromatographic test includes the steps of: acquiring a digital image of a rapid immunochromatographic test with an image acquiring unit, acquiring at least one main characteristics of the digital image with a characteristics
10 acquiring unit, calculating and quantifying the main characteristics of the digital image with a neural-network quantifying unit, and sending results of the quantification to an output unit.
